

How to Run the proposed IPS in the project?

1 Pre- installation

1.1 Hardware

1.1.1 WiFi Card that support monitor mode

1.1.2 The Ryze Tello & DJI

1.2 Software

1.2.1 Kali Linux

1.2.2 Scapy

1.2.3 CustomTkinter

1.2.4 Json File

1.2.5 WIFI Analyzer App

1.2.6 Aircrack-ng tools

1.2.7 "DJI Fly" App

1.2.8 "Tello FPV" App

1.2.9 IPS (deauth.py, response.py, drones.json)

1.3 Placing the IPS (deauth.py, response.py, drones.json) in the same folder

How to use the detection module and Response Module

(1) Insert the WiFi card that support the monitor mode

(2) Set the monitor Mode in the WIFI card

(3) Connect the drone with the Mobile app \ Remote Controller

(4) Mount the channel to the WIFI card

(5) Correct the json file according to the channel

(6) Control the drone to take off

(7) Open the deauth.py and response.py in the Kali Linux

(8) Process deauth attack to the drone

(9) User make decision whether to use the function in the response module

(10) Press the buttons in the response module if appropriate
